JavaScript, Node.js, Express, TypeScript, React, Next.js

Libraries & Tools

GraphQL & REST, Apollo, Stripe (Payments & Connect)

Databases & CMS

Firestore, MongoDB, WordPress

< EXPERIENCE >

Full Stack Developer | Esparter

Mar 2020 - present

-  Presented with a wireframe brief in June, I was tasked with economically creating an exchange platform MVP from scratch
 -  Implemented user registration, authentication, automated contact form, custom user dashboard with file uploader
 -  Utilised external APIs, developed internal REST API to curate and display a grid feed with 100s of leads - with a dynamic details page generated for each lead
 -  Integrated Stripe with the Stripe Connect marketplace APIs to enable the website to serve as a fee-taking exchange platform
- Once the MVP had garnered considerable positive feedback, I began development of the production grade platform.*
-  Developed a Node Express backend with Apollo Server GraphQL, deployed to a VPS, using a MongoDB Atlas database.
 -  React/Next.js frontend with TypeScript, Apollo Client with a custom map displaying property locations using Google Maps

< PROJECTS >

-  **Bekaemp Meningitis** | International charity website
Made with Next.js, WordPress & GraphQL
-  **Pawlaroid** | 'Instagram for dogs'
Made with Create-React-App, Firebase & Framer
